

Top Tennis Performance Academy — Post-MVP

Feature Set: Athlete Development vs College Placement

Context

We are building a platform for a high-performance tennis academy in Latin America.

The current MVP focuses on creating structured evidence around athlete development: coach reports, athlete reflections, tournament performance, physical testing, specialist reports, videos, and progress history.

The long-term strategic goal is bigger than internal athlete tracking. The academy wants to become a trusted source of tennis talent for U.S. college programs by producing recruiter-ready evidence that goes beyond rankings, UTR, and coach word-of-mouth.

The system should eventually support two connected but distinct product stages:

1. **Athlete Development**
2. **College Placement / Recruiting Readiness**

These two stages share data, but they have different users, workflows, permissions, outputs, and risks.

1. Core Product Philosophy

The platform should not only “store athlete data.” It should create structured evidence.

Most academies already have coaches, training plans, informal notes, WhatsApp messages, spreadsheets, and scattered videos. The product should turn that fragmented knowledge into a trustworthy athlete record.

The platform has three long-term data layers:

Layer 1: Athletics

Starts from the beginning.

This includes everything related to tennis level, physical development, training behavior, tournament history, videos, coach observations, specialist input, and the athlete’s own reflection.

Layer 2: Academics

Also starts from the beginning, but should be lightweight at first.

The academic layer should help the academy understand whether the athlete is on track for future college opportunities. It should not become a full school management system.

It should capture school identity, graduation timeline, GPA/average, English level, test progress, academic goals, and document readiness.

The school, parents, or tutors may need to be involved here because coaches may not have accurate access to academic records.

Layer 3: College Placement / Recruiting Readiness

This is a triggered phase.

It should not necessarily be active for every 12U or early-stage athlete. It becomes relevant when the athlete has some combination of:

- clear interest in the U.S. college pathway,
- age/grade proximity to recruitment,
- sufficient tennis level,
- family intent,
- graduation timeline,
- academic viability,
- video assets,
- coach recommendation,
- eligibility requirements.

This phase includes recruiting preferences, NCAA/NAIA/NJCAA eligibility status, school list, outreach tracking, recruiter-facing Talent Card, coach communication, and placement pipeline.

2. Stage One: Athlete Development

Purpose

The Athlete Development stage helps the academy, coach, athlete, parents, and specialists understand:

- How is the athlete progressing?
- What are they working on?
- What evidence exists?
- What patterns are emerging over time?
- What does the athlete understand about their own game?

- What interventions are needed from coaches, physio, nutrition, or psychology?

This is the internal operating system of the academy.

Primary Users

- Athlete
- Coach
- Parents
- Admin
- Physical trainer
- Physiotherapist
- Nutritionist
- Sport psychologist

Main Outputs

- Athlete profile
- Development dashboard
- Monthly coach reports
- Physical testing reports
- Tournament history
- Post-tournament forms
- Specialist reports
- Training assignments
- Video review history
- Parent progress view
- Internal athlete timeline

Key Modules

2.1 Athlete Profile

The canonical athlete record.

Fields:

- Full name
- Date of birth
- Age category
- Graduation year
- Dominant hand
- Backhand type
- Height
- Weight
- Wingspan
- Enrollment date

- Assigned coach
- Training group/shift
- Parent/guardian contacts
- Emergency contact
- Consent status
- Media/video consent
- Data-sharing permissions

2.2 Athletic Metrics

Fields:

- Current UTR
- Peak UTR
- 12-month UTR delta
- UTR history
- AMTP ranking
- ITF Junior ranking
- ITF points
- Tournament history
- Match record by surface
- Best wins
- Competitive notes
- Doubles experience
- Recent schedule

2.3 Coach Reports

Frequency: monthly or every training cycle.

Dimensions:

- Serve
- Forehand
- Backhand
- Volley
- Return
- Footwork
- Shot selection
- Risk management
- Key points
- Tactical adaptation
- Training-to-match transfer

Each field should include:

- Rating from 1–5
- Qualitative note

- Evidence/anecdote
- Suggested next focus

2.4 Physical Development

Owners: physical trainer, physio, nutritionist.

Fields:

- Sprint 20m
- Beep test
- Vertical jump / CMJ
- Spider drill
- Agility tests
- Squats in 1 minute
- Push-ups in 1 minute
- Functional movement screen
- Injury timeline
- Recovery status
- Load-management notes
- Optional anthropometry

Sensitive fields, such as body composition, weight concerns, eating behavior, or injury details, need restricted permissions and consent rules.

2.5 Mental Performance

Owner: sport psychologist.

Fields should be defined by the psychologist, but possible categories:

- Stress response
- Focus / attention
- Emotional regulation
- Confidence
- Growth mindset
- Coachability
- Competition anxiety
- Reset routines
- Recent session focus

Important: mental-health notes should not automatically be visible to recruiters, sponsors, or all coaches. The product should distinguish between:

- private clinical/professional notes,
- general performance psychology summary,
- recruiter-safe development signal.

2.6 Character & Leadership

Owner: coach.

Fields:

- Work ethic
- Coachability
- Respect for teammates
- Conduct log
- Positive moments
- Leadership examples
- Mentoring younger athletes
- Training consistency

This should be primarily internal. Recruiter-facing summaries should be curated and consent-based.

2.7 Athlete Voice

Owner: athlete.

This is one of the product's strongest differentiators.

Includes:

- Monthly self-assessment
- Post-tournament form
- Goal reflection
- Match preparation notes
- Match execution reflection
- Lessons learned
- Emotional response to pressure
- Next focus

Post-Tournament Form fields:

- Tournament name
- Opponent
- Result
- Pre-match strategy
- Serve + 1 plan
- Return plan
- Rally patterns
- How did you feel before the match?
- What worked?
- What did not work?
- What was the decisive moment?

- How did you respond to pressure?
- What did you learn?
- What is your next training focus?
- Strategy execution rating

2.8 Training Assignments

Coach assigns drills or exercises.

Fields:

- Exercise title
- Objective
- Instructions
- Due date
- Video upload
- Coach feedback
- Completion status
- Athlete reflection

2.9 Attendance and Training Consistency

Fields:

- Sessions attended
- Sessions missed
- Reason for absence
- Tournament conflicts
- Injury-related absence
- Training load
- Attendance trend

This should feed into development reports and parent visibility.

3. Stage Two: College Placement / Recruiting Readiness

Purpose

The College Placement stage helps the academy answer:

- Which athletes are ready to be presented to colleges?
- What level of college tennis fits each athlete?
- What academic and eligibility steps are missing?

- What schools should be targeted?
- What assets are ready?
- What outreach has happened?
- What recruiter conversations are active?
- What next action is needed?

This is not just a Talent Card. It is a recruiting workflow.

Primary Users

- Academy admin
- Head coach
- Athlete
- Parents
- Recruiting coordinator
- External recruiter / college coach, through controlled sharing

Main Outputs

- Recruiting readiness dashboard
- College fit profile
- Academic readiness profile
- Eligibility checklist
- Recruiting asset checklist
- Talent Card
- Shareable recruiter link
- School target list
- Outreach CRM
- Placement pipeline

4. Trigger Logic: When Does College Placement Start?

College Placement should not be fully active for every athlete from day 1.

The system should support a `college_pathway_status` field:

- Not applicable
- Exploring
- Monitoring
- Preparing
- Active recruiting
- Committed
- Closed / not pursuing

Suggested Triggers

An athlete moves from general development into college readiness when one or more of the following are true:

Age / Timeline Trigger

- Athlete is roughly 14–15 and starting to explore U.S. college options.
- Athlete is within 2–3 years of expected high-school graduation.
- Athlete has a known graduation year and possible college entry year.

Intent Trigger

- Athlete or family expresses interest in U.S. college tennis.
- Coach identifies college pathway as realistic.
- Academy wants to start preparing the athlete's profile.

Athletic Trigger

- UTR/ranking suggests potential fit with some level of college tennis.
- Athlete is competing regularly.
- Athlete has enough match history and video evidence.

Academic Trigger

- Athlete has sufficient academic performance or is willing to improve.
- English-test preparation becomes relevant.
- Transcript planning is needed.

Operational Trigger

- Talent Card is requested.
- Coach wants to contact colleges.
- Athlete is invited to showcase/tournament.
- Family asks for college guidance.

5. Academic Readiness Layer

Purpose

The academic layer should begin early because academic issues cannot be fixed at the last minute.

However, the MVP should keep it simple and avoid trying to replace the school.

Users Involved

- Athlete
- Parent
- Academy admin
- Coach, read-only summary
- School counselor or teacher, possibly through document upload or periodic validation
- External academic advisor, optional

Key Fields

Academic Identity

- Current school
- Country
- School system
- Current grade/year
- Expected graduation date
- Expected college entry term
- Language of instruction

Academic Performance

- GPA or local average
- GPA scale
- Converted GPA, optional
- Class rank, optional
- Academic trend
- Strongest subjects
- At-risk subjects

English Proficiency

- TOEFL status
- TOEFL score
- IELTS status
- IELTS score
- Duolingo English Test, optional depending on university acceptance
- English tutor / prep plan
- Target score

Standardized Tests

- SAT status
- SAT score
- ACT status
- ACT score
- Test planned date

- Test prep notes

Documents

- Transcript uploaded
- Transcript translated
- Graduation certificate uploaded
- School contact added
- Academic recommendation uploaded
- Document verified by parent/admin
- Document verified by school, optional

Academic Permissions

Academic information should be visible to:

- Athlete
- Parent
- Admin
- Authorized coach summary view

Recruiter visibility should be configurable.

Sensitive academic notes should not be shared externally by default.

6. Eligibility Layer

Purpose

The eligibility layer tracks whether the athlete is prepared for NCAA, NAIA, NJCAA, or other U.S. college athletic pathways.

This should be checklist-based, not overly legalistic.

NCAA Eligibility Fields

- NCAA Eligibility Center account created
- NCAA ID
- Profile account or certification account
- Academic records submitted
- Transcripts submitted
- Translations submitted
- Graduation proof submitted
- Amateurism questionnaire completed
- Amateurism certification requested

- Certification status
- School placed athlete on institutional request list
- Notes / blockers

NAIA Eligibility Fields

- PlayNAIA account created
- NAIA ECID
- Documents submitted
- InCred evaluation needed
- InCred status
- Graduation proof submitted
- Eligibility status
- Notes / blockers

NJCAA / JUCO Fields

- Interested in JUCO pathway
- Schools under consideration
- Academic requirements reviewed
- Transfer plan needed
- Notes

Visa / International Student Readiness

This should be lightweight and informational, not legal advice.

Fields:

- Passport valid
- Passport expiration date
- U.S. visa status
- I-20 process not started / started / completed
- Financial documentation needed
- Family needs external advisor

Eligibility Permissions

Eligibility status can be visible to athlete, parent, admin, and assigned recruiting coordinator.

Recruiter-facing visibility should be summarized, for example:

- NCAA Eligibility Center: In progress
- Academic documents: Submitted
- Amateurism: Pending
- Expected graduation: June 2028

Do not expose unnecessary private documents directly unless explicitly shared.

7. College Fit Profile

Purpose

Recruiting is not only about whether the athlete is good enough. It is about fit.

The system should help the academy avoid sending every athlete to every school.

Fields

Athletic Fit

- Target division: NCAA D1, D2, D3, NAIA, NJCAA
- Singles level
- Doubles level
- Projected college level
- Coach assessment
- UTR target range
- Competitive ambition
- Preferred lineup role

Academic Fit

- Intended majors
- Academic selectivity preference
- School size preference
- Public/private preference
- Academic support needs

Geographic Fit

- Preferred regions
- States of interest
- Climate preference
- Distance from Mexico/LatAm
- Travel constraints

Financial Fit

- Scholarship need
- Family budget range
- Need-based aid interest
- Merit-aid interest

- Open to partial scholarship
- Open to D3 without athletic scholarship
- Open to NAIA/JUCO

Personal Fit

- Campus size
 - Spanish-speaking community preference
 - International student support
 - Religious affiliation preference, if relevant and voluntarily provided
 - Urban/suburban/rural preference
-

8. Recruiting Assets

Purpose

A recruiter should be able to evaluate the athlete quickly.

The Talent Card should not be a giant internal report. It should be a curated packet.

Asset Checklist

- Athlete profile photo
- Short bio
- Coach summary
- Highlight video
- Full match video
- Serve/return video
- Recent tournament schedule
- Recent results
- Best wins
- UTR profile link
- ITF profile link
- Academic summary
- Transcript, optional
- Test scores, optional
- Coach contact
- Parent contact, if appropriate
- Athlete email, if appropriate
- Academy contact
- Recommendation letter
- Athlete intro statement

Talent Card Modes

Internal Preview

Visible to academy team.

Includes warnings, missing fields, private notes, and readiness score.

Recruiter Version

Clean external version.

Only includes approved fields.

Parent Version

Shows what will be shared and asks for consent.

Athlete Version

Lets the athlete review bio, goals, videos, and personal statement.

9. Recruiting CRM / Placement Pipeline

Purpose

Once active recruiting begins, the academy needs a workflow to manage school outreach.

Entities

School

- School name
- Division
- Conference
- Location
- Academic profile
- Tennis program level
- Coach name
- Coach email
- Program website
- Roster size
- International players
- UTR range of current roster

- Majors offered
- Cost estimate
- Scholarship notes

Outreach Record

- Athlete
- School
- Coach contacted
- Date contacted
- Channel
- Message sent
- Assets shared
- Response status
- Interest level
- Next follow-up date
- Notes

Pipeline Status

- Not contacted
- Contacted
- Responded
- Interested
- Call scheduled
- Video requested
- Application needed
- Visit planned
- Offer / roster spot discussed
- Committed
- Rejected
- Not a fit
- Archived

10. Recruiting Readiness Score

The system should compute a simple readiness score to help admins prioritize.

Possible Categories

Athletic Readiness

- Current UTR added
- Recent match results added
- Tournament history complete

- Highlight video available
- Full match video available
- Coach assessment complete

Academic Readiness

- Graduation year added
- School added
- GPA/average added
- Transcript uploaded
- English test status added
- Intended majors added

Eligibility Readiness

- NCAA/NAIA pathway selected
- Eligibility Center status added
- Documents checklist started
- Amateurism status added
- Passport/visa readiness reviewed

Recruiting Fit Readiness

- Target divisions selected
- Target regions selected
- Scholarship need added
- College preferences added
- Family budget range added
- Open pathways selected

Communication Readiness

- Coach contact added
- Parent contact added
- Athlete intro statement added
- Talent Card approved
- Consent to share confirmed

Output

Readiness level:

- Not ready
- Needs foundation
- Preparing
- Recruiter-ready
- Active recruiting

11. Permissions and Privacy Model

This is especially important because many athletes are minors.

The product should separate data into visibility classes.

Visibility Classes

Private Specialist Data

Examples:

- Detailed psychology notes
- Nutrition/body composition notes
- Medical or injury details
- Sensitive family notes

Visible only to authorized specialist, admin, and possibly parent depending on consent.

Internal Development Data

Examples:

- Coach reports
- Physical testing
- Training consistency
- Athlete reflections
- Internal character notes

Visible to coach, athlete, parent, admin, and relevant specialists depending on configuration.

Recruiter-Safe Data

Examples:

- UTR/ranking
- Results
- Video
- Graduation year
- Academic summary
- Coach summary
- Curated character/development signal

Visible externally only when approved.

Sponsor-Safe Aggregated Data

Examples:

- Academy-level progress
 - Team-level tournament results
 - Number of athletes improving
 - Number of placements
 - Aggregate training consistency
 - No sensitive individual data unless explicitly approved.
-

12. Role-Specific Product Needs

Athlete

Needs:

- Understand progress
- Complete PTFs
- See goals
- Upload videos
- Review Talent Card
- Track recruiting readiness
- Own their story

Coach

Needs:

- Evaluate athletes
- Track development
- See trends
- Assign training
- Review video
- Recommend athletes
- Generate recruiter-safe summaries

Parent

Needs:

- Understand progress
- See return on investment
- Track academic/recruiting readiness

- Upload documents
- Approve data-sharing
- Understand next steps

Admin

Needs:

- Global athlete overview
- Missing-data dashboard
- Readiness dashboard
- Sponsor reports
- Role permissions
- Data quality checks
- Talent Card generation
- Recruiting pipeline oversight

Specialist

Needs:

- Add reports
- See relevant athlete context
- Keep sensitive notes restricted
- Provide recruiter-safe summaries when appropriate

Recruiter / College Coach

Needs:

- Evaluate quickly
- See tennis level
- Watch video
- Understand timeline
- Confirm academic/eligibility basics
- Contact coach
- Request more information

Sponsor

Needs:

- See academy impact
- See aggregate progress
- See tournament/team results
- See placement outcomes

- Avoid sensitive athlete-level data unless approved
-

13. Recommended Post-MVP Feature Set

Phase A: Foundation Expansion

Goal: Make the internal athlete record complete and trustworthy.

Features:

1. Real backend and auth
2. Real roles and permissions
3. Athlete profile data model
4. Coach report creation
5. PTF creation
6. Tournament history
7. Physical testing module
8. Specialist report module
9. Video upload/linking
10. Parent read-only view
11. Attendance tracking
12. Basic academic profile

Phase B: Academic Readiness

Goal: Start preparing college-pathway athletes earlier without overbuilding.

Features:

1. Academic profile
2. Graduation timeline
3. School contact
4. GPA/average tracking
5. English test tracking
6. Transcript/document upload
7. Parent document checklist
8. Academic readiness status
9. Academic data permissions

Phase C: Recruiting Readiness

Goal: Determine which athletes are ready to be presented.

Features:

1. College pathway status
2. Recruiting readiness score
3. NCAA checklist
4. NAIA checklist
5. NJCAA interest tracking
6. Recruiting preferences
7. College fit profile
8. Recruiting asset checklist
9. Consent to share externally

Phase D: Talent Card

Goal: Generate a recruiter-facing asset.

Features:

1. Talent Card builder
2. Internal/recruiter/parent preview modes
3. Shareable web link
4. PDF export
5. Recruiter-safe field controls
6. Coach recommendation section
7. Highlight/full match video section
8. Academic summary
9. Eligibility summary
10. Athlete intro statement

Phase E: Recruiting CRM

Goal: Manage outreach and placement.

Features:

1. School database
2. Program fit notes
3. Coach contact records
4. Outreach tracker
5. Follow-up reminders
6. Pipeline statuses
7. Response tracking
8. Offer/commitment tracking
9. Placement outcomes

Phase F: Sponsor Reporting

Goal: Show academy-level impact.

Features:

1. Sponsor dashboard
 2. Aggregate athlete progress
 3. Tournament results
 4. College placement outcomes
 5. Team-level metrics
 6. Exportable sponsor report
 7. Privacy-safe data aggregation
-

14. Open Product Questions

Academic Involvement

- Should parents upload academic data manually?
- Should the school or teacher validate academic records?
- Should the platform support a “school counselor” role?
- Should academic records be uploaded as documents or entered as structured fields?
- Who owns data accuracy: parent, school, admin, or athlete?

Eligibility Timing

- At what age should the system prompt the family to explore NCAA/NAIA?
- Should the system automatically trigger recruiting readiness based on graduation year?
- Should there be a “college pathway interested?” field at onboarding?
- Should all athletes have academic profiles from day 1, even if not pursuing college?

Talent Card

- What fields are always included?
- What fields require consent?
- What fields are internal only?
- Should the athlete approve the Talent Card before sharing?
- Should parents approve for minors?
- Should specialist summaries be excluded by default?

Recruiter Portal

- Should recruiters get a public link with no login?
- Should they need a password/token?

- Should the academy track views?
- Should recruiters be able to request more information?

Sponsor Portal

- Should sponsors see individual athlete stories or only aggregate data?
- Should sponsor reports include named athletes only with explicit permission?
- Should sponsor-facing reports include placement outcomes?

15. Feature Design Request for Claude

Using this document, help design a robust post-MVP product roadmap and feature set.

Please produce:

1. A clean separation between Athlete Development and College Placement.
2. A proposed information architecture.
3. Recommended database entities and relationships.
4. Role-based permissions.
5. Feature modules by phase.
6. Trigger logic for when an athlete enters the college placement workflow.
7. Suggested academic readiness workflow.
8. Suggested NCAA/NAIA/JUCO eligibility workflow.
9. Talent Card data model and recruiter-facing layout.
10. Sponsor reporting model.
11. Risks of overbuilding and how to avoid them.
12. MVP vs Post-MVP recommendations.
13. Questions we should ask coaches, parents, athletes, specialists, schools, and recruiters before building.
14. A prioritized implementation roadmap.

Important constraints:

- Many athletes are minors.
- Sensitive data must be permissioned carefully.
- Mental, nutrition, medical, and body-composition data should not be exposed externally by default.
- The academy wants to create evidence, not just store data.
- The Talent Card should be recruiter-useful, not a giant internal report.
- The product should support LatAm athletes pursuing U.S. college tennis.
- The system should be useful internally even before the college placement workflow is active.
